

COATINGS & LININGS: CHEMICAL RESISTANT

Project: Re-Line J-105 HCL Tanks

Location: Beaumont, Texas

System: Ceilcote Flakeline 232

Area: 5,442 Square Feet

Completed: 2001

A regular Barcol test of the four J-105 area tanks showed that the 10 year old lining had deteriorated to a dangerous level, showing daylight through the tanks after surface preparation abrasive blasting.

At that point Mobile Enterprises, Inc. was contracted to complete abrasive blasting, then prime the fiberglass substrates, install two layers of new fiberglass mat and topcoat with two gel coats of Flakeline 232. All nozzles were refitted with inserts made of Flakeline 232 resin.

The job was completed and the tanks put back on line for production.
